Project Name: **BookMyMaid**

Project Summary:

Project BookMyMaid is a small attempt to liberate the hardworking maids of the helping industry in our locality and help them get their rightful share of money and respect. It also extends to help Cooks, servants and nannies/care takers etc. who play a crucially important role in the society. We seek to create an online venture comprising maids, baby-sitters, nurses and cooks and so on. This online portal may be accessed by means of website which may be further used for maid booking and payments if intended. It may also divide the maids in different categories for easy search and look-up by the viewers or the users of the website. As a solution to the anarchy in the helping industry, not only will it provide orderliness but at the same time, it will also connect the supply to the demand and remove the concept of middle men.

The BookMyMaid Portal will provide a connection mechanism to all the maids in the area and will also provide standardization and regularity in the salaries paid to them. The online venture may also serve as an easy means to find and book maid/helpers online through the website depending on the need of the user.

Adding on, the portal may also serve as a store for information of both the maid and the client in case of any unwary situation. Security comes as a side effect of the process and we can very well determine which worker is working in which house and which part of the city. Since every transaction will be recorded, there will be no cases of discrepancies and fraud. Lastly, Project BookMyMaid might also be a step towards our Hon'ble Prime Minister's idea of Digital India.

- **FEATURES:**

1. User Authentication (Registration/Log in)
   (New Users Registration First and Already User Register Log In)

2. Searching and Sorting
   (Searching and Sorting Maid on Customer Requirements)
